

BROWSING AND RETRIEVAL OF FULL BROADCAST-QUALITY VIDEO
ABSTRACT OF THE INVENTION

A method includes steps of indexing a media collection, searching an indexed library and browsing a set of candidate program segments. The step of indexing a media collection creates the indexed library based on a content of the media collection. The step of searching the indexed library identifies the set of candidate program segments based on a search criteria. The step of browsing the set of candidate program segments selects a segment for viewing.
